

ONE MEETING SPACE EASILY BECOMES TWO

WALLGOLDFINGER | SUMMIT BRIDGE

# THE SUMMIT BRIDGE: an exclusive WallGoldfinger reconfigurable solution for rooms with operable walls

## WHAT'S A SUMMIT?

Summit tilt-top tables offer the ultimate in reconfigurability for conferences and more. Tabletops tilt to allow them to fit through doorways and in elevators, and tables are set on casters so they can easily roll to create a new table configuration or to be stored. When the tabletop is lowered, the casters automatically retract for stability.

Most commonly made in a 60- by 60-inch size, Summits can be made as large as 60 by 96 inches. Tables nest for compact storage.

Summits are constructed with beautiful materials, including veneer, plastic laminate, glass, lightweight stone and stone resin, and metal edging. The tables fully integrate power and data with full wire management within the table base. The table base design further provides exceptional leg room from all sides.

## AN ANDERLOC

Anderloc's are an exclusive WallGoldfinger design that allows you to quickly and easily lock your tables together.

Align the Anderloc with threaded inserts on the underside of the table and twist knobs tight to secure tables together. Untwist to separate tables.

## HOW IT WORKS

Other than staff, your office space can be your greatest operational expense. WallGoldfinger's exclusive Summit bridge design allows you to quickly and conveniently make the most of your meeting space while maintaining the aesthetic your staff and clientele appreciate and expect.

Here's how it works:

WallGoldfinger builds you two fixed tables of your choice of size, materials and base design (square or trapezoid bases). One of the fixed table's tops is built to slide a couple inches.

At the same time, WallGoldfinger builds you matching Summit tables. Summit tables have tops that tilt. In the tilted position, Summits have casters that easily extend to roll your tables. In the flat position, the

casters automatically retract so the tables are firmly fixed on the floor.

For a meeting space with a room divider, or operable wall, place a fixed table on each side of the divider. For large meetings, keep the divider open and roll (bridge, if you will) the Summits between the fixed tables for a long boardroom table.

For smaller meetings, remove the Summits. That sliding top on one of the fixed tables allows you to more easily access the Summits. Tilt them and roll them away. They can be used for additional meeting space or nested and stored.

The Summit design also allows for a nearly seamless meeting surface. The Summits lock together with a screw mechanism requiring no tools called an Anderloc. And Summits also easily level with no tools required.

## SIMPLY PUT

### FOR ONE LARGE MEETING SPACE

- 1) Slide over your fixed table top
- 2) Roll your Summits into place
- 3) Slide your top back
- 4) Lock and level

### FOR TWO MEETING SPACES

- 1) Unlock
- 2) Slide over your fixed table top
- 3) Roll your Summits away to use elsewhere or store
- 4) Slide your top back
- 5) Extend your operable wall
